New recombinant polypeptide derived from albumin - comprising albumin
mol. contg. bioactive peptide insert

Patent Assignee: RHONE-POULENC RORER SA (RHON)

Inventor: BECQUART J; CONSEILLER E; GUITTON J; HARDY F; YEH P

Number of Countries: 019 Number of Patents: 002

Patent Family:

Abstract (Basic): FR 2719593 A

New recombinant polypeptides (I) comprise an active component derived from a natural or synthetic biologically active polypeptide genetically inserted into an albumin mol. Also claimed are: (1) a variant of a nucleotide sequence coding for an albumin mol. contg. at least one unique non-natural restriction site; (2) a nucleotide sequence coding for a polypeptide (I); etc.

USE - The insert pref. comprises all or part of a therapeutically active human polypeptide, esp. selected from enzymes, enzyme inhibitors, antigens, antibodies, hormones, receptors, clotting factors, cytokines (e.g. interferons), growth and/or differentiation factors, osteogenic factors, cell motility factors, cytostatic factors, bactericidal or antifungal factors, and adhesion mols. In addition to therapeutic uses, (I) can be used for diagnostic or research purposes, e.g. for vaccine prodn. and for medical imaging. The nucleotide sequence as in (2) can be used for gene therapy (claimed).

ADVANTAGE - Human serum albumin (HSA) mols. contg. bioactive protein inserts are capable of efficiently presenting the active structure of the insert to its interaction sites while maintaining its activity and providing high plasma stability.

Dwg.0/6
